

Foreign Coinage by U.S. Mints 1876-1980

Introduction

The mints of the United States were first authorized to manufacture coins for foreign governments in 1874.¹

The first foreign coinage order was executed for the Government of Venezuela during the fiscal year ending June 30, 1876.

Through December 31, 1980, U.S. mints at Philadelphia, Pa., San Francisco, Calif., New Orleans, La., and Denver, Colo., had produced 11,193,348,346 coins for 42 foreign countries.

Explanatory notes

In some instances, before 1906, production figures were recorded on a U.S. Government fiscal year basis (July 1 one year through June 30 the following year). Two calendar years combined in the date column of a table indicate that production occurred between July 1 and June 30 of the years stated. The dates appearing on coins may or may not coincide with the production year.

Metallic composition.—The proportions of metals are expressed either in percentages (symbol %) with the proportions adding to 100 percent; or, for gold and silver coins, in thousands with the proportions of precious metal and base metal adding to 1,000 parts.

Gross weight.—This refers to the overall weight of one coin of the specified denomination.

Conversion factors.—Original weight units specified in grains have been converted to grams and diameters specified in inches converted to millimeters. The following conversion factors were used:

<i>Weight units</i>	<i>Measurement units</i>
1 grain=0.0647989182 gram.	1 millimeter=0.03937 inch.

Symbols used in tables.—
